A close-up photograph of a person's hand holding a black computer mouse. The hand is positioned over a wooden desk. In the background, a black keyboard is visible, and another person's hand is blurred, suggesting a collaborative work environment. The lighting is soft and focused on the hand and mouse.

Why cut costs when we can offer you more bang for your buck?

Rent the best IP telephones simply and flexibly – with **Snom as a Service**

Why shouldn't prominent, tried and tested systems like leasing also be used in the office equipment sector, as well? Investments in IT infrastructure are often among the biggest expense generators for companies, after all, and this applies to both large conglomerates and small and medium-sized companies. If this weren't enough, times are changing so quickly at the moment that any equipment you purchase and, perhaps, write off as a business expense will already have become obsolete before it even gets you.

With the **Snom as a Service** rental system, we offer our clients much more flexibility, complete control over their costs and excellent value for money. All you have to do is select the telephony systems you require from our partners in our portfolio, and pay just one fixed monthly rental fee.

The clincher...? After 4 years at the very latest, the telephones you rent from us are swapped out for the most up-to-date models. Plus, you may either add additional devices to your contract or reduce the amount of equipment you rent from us at any time. This ensures that you have complete control over your costs at all times.

The Benefits for You at a Glance

- Your investment is protected and you have complete cost control
- Everything comes from the same source – an efficient telephone system and high quality IP telephones.
- Every 48 months, you can swap out your equipment for brand new, up-to-date devices.
- You can add additional devices to your booking or exchange them at any time.

Step 1

Select the right technology partner for you.

Step 2

Choose the right Snom phone for you from our extensive range.

Step 3

Our highly experienced partners will help you implement your new telephone system and integrate it into your company.
