

Siemens Gigaset S685 IP

Next generation cordless IP phone with integrated answerphone

The new Siemens S685IP Cordless phone is ideal for both business and home users who want a quality cordless phone system. Handling both land line and VoIP calls simultaneously, this new Siemens cordless phone features the very latest wide-band audio standard for much improved HD voice quality. The next generation CAT-iq DECT technology also ensures much better reliability than Wifi phones.

The S685IP is the first cordless IP phone to include an integrated answer phone. With 30 minutes recording time the S685IP can record calls from both the Internet (VoIP) and the land line and also functions when any other line is in use.

The DECT base station can handle three simultaneous calls, two over broadband Internet (VoIP) and one over the normal land-line. Setting up the S685 IP to make VoIP calls could not be easier. The handset's menu contains all the main UK VoIP Service Providers and their configuration settings are loaded automatically at the touch of a button. To change between Internet and fixed-line telephony all users need to do is press and hold the green call key.

Six handsets can be registered with the base station and six different VoIP accounts configured to the handsets. This makes the S685IP ideal for both business and residential users who require an modular phone system with multiline calling for up to six handsets; saving the expense of installing additional land lines or multiple base stations.

Highlights

Integrated answering machine

Whether you are using the S685IP for business or home use the integrated answer phone will ensure that no important messages are missed. New messages are displayed on the phone's handset, so you'll know someone tried to reach you even if you're away from the base station. You can also easily keep track of who called and when because the Gigaset S685IP announces the date and time of new messages by voice.

Phone Directory

250 vCard entries; Store first and last name for each contact together with 3 number options + email address and birthday notification.

Bluetooth

The S685IP is the first Gigaset VoIP system that supports Bluetooth enabling users to:

- Make and receive calls via a Bluetooth headset.
- Exchange of contacts with Bluetooth enabled mobile phones.
- Connection with PC for synchronisation with Microsoft Outlook contacts.
- Download photos for picture caller ID and screen saver.

New Standards of voice quality (HDSP)

With High Definition Sound Performance (Wideband Audio G722) and CAT-iq next generation DECT standards, the Gigaset S685 IP lets you experience VoIP calls in unrivaled wideband audio quality. The extended frequency range means you can enjoy a conversation with twice the clarity of a normal phone call and get closer to the person you're talking to.

Lower Carbon footprint with ECO DECT

Thanks to an all new energy-saving power supply, these latest ECO DECT phones use up to 60% less energy than conventional cordless phones.
