When Connectivity Fails, So Does Business.

In today's connected world, even a few minutes of downtime can mean missed calls, frozen systems, and lost revenue. That's where you come in.

With vM2M IoT powered by Anvil and our advanced multinet SIMs, you can offer a ready-made failover solution that keeps your customers online, instantly, automatically, securely, and with the best possible signal, everywhere.

Designed specifically for resellers, this system delivers:

- Plug-and-play hardware – no complex installs
- Multi-network SIMs – connect to all major UK networks
- Static IP address ready – SIMs with static Public IP's
- Dormant SIMs – only activate on failure = cost control
- Remote management – no engineer visits required
- Rapid deployment – pre-configured and pre-tested

Reliable Connectivity. Zero Fuss.

The vM2M Anvil solution is a fully managed IoT failover system. Once installed, it sits silently in the background – ready to kick in the moment the main internet line fails.

What Makes It Smart:

- SIMs are pre-provisioned and dormant – no surprise usage charges
- Routers arrive ready to go, straight from ProVu
- Data usage and connectivity health are tracked in real-time
- Connect to the strongest available UK mobile network - no dead zones, no dropped connections
- All managed through Anvil's live online portal

Whether your customers are schools, retailers, offices or remote sites – this is the reliable backup they didn't know they needed.

Step 1: Pick the Hardware That Fits

We offer a range of pre-approved routers tested for failover reliability. Routers can be white-labelled and pre-provisioned, then shipped directly to your customer – ready to plug in.

Top Devices Include:

TP-Link NX510v
Router

5G-ready, WiFi 6, 1x
FXS port

DrayTek Vigor C410ax
/ C510ax

Enterprise-grade
LTE routers

ZTE 4G USB Dongle

Simple and cost-
effective

Need help choosing? We're here to guide you.

Step 2: Tailor Your Connectivity Plan

Whether your customer needs a few GB or a robust 100GB safety net, we've got flexible options to suit. SIMs work across all major UK mobile networks and can be upgraded or topped up at any time via the portal.

Dynamic IP or Static IP Plans

Term Length

MONTHS

Why Resellers Love It:

Easy bundling with routers

Clear data visibility

Instant top-ups

Dormant billing model: SIMs only activate on failure

Step 3: Manage it All with Anvil

Anvil's portal gives you full visibility and control of every SIM you deploy.

Features Include:

- Real-time usage monitoring
- Device grouping and labelling
- Instant alerts when data thresholds are hit
- Top-ups with just a few clicks
- Full audit trail for data use
- Aggregate data across entire sim estate

Whether managing 1 site or 100, Anvil's portal puts you in the driver's seat.

Need access? Our team will get your account set up — fast.

Step 4: Order Everything in One Place

Ordering your failover solution is quick and seamless with ProSys, our partner-only online portal.

Here's how it works:

- Log in to ProSys
- Select your router and SIM plan from dropdown menus
- Add white-labelling if needed
- Submit your order — job done

We handle the rest, including provisioning, packaging, and dispatch.

New to us? Let's get you set up today.

Just need a SIM?

Speak to us about your IoT requirements, we don't only do Data SIMS, but also SIMS for other IoT projects as well as roaming SIMs for EU/US.
