## What is Bria Stretto?

CounterPath Bria Stretto is a cloud managed provisioning server tool for Bria softphone clients. Offering a range of softphone client licenses for users or devices, Bria Stretto enables you to remotely manage licenses through the Stretto portal.

LEADERS IN VOIP HARDWARE DISTRIBUTION

The Stretto platform works with your existing network elements making it quick and easy to install. With its flexible modular design user functionality can be revised at any time.

## What's the difference between Bria 4 and Bria Stretto?

CounterPath Bria 4 does not offer flexibility in terms of additional add-ons/user support. Available for purchase directly from CounterPath, Bria 4 requires manual configuration set up by the end user.

Bria Stretto on the other hand offers access to the CounterPath cloud server tool which enables you to program all softphone client user details and settings. For added peace of mind, Bria Stretto clients also have access to both ProVu and CounterPath technical support.

COUNTERPATH BRIA STRETTO

## How can Bria Stretto benefit ITSPs and IT Administrators?

Bria Strettos' hosted provisioning module provides ITSPs and IT Administrators with an easy to use framework which enables you to remotely configure Bria desktop, tablet and mobile solutions as well as manage ongoing configuration updates and upgrades.

# What types of licenses are available from ProVu?

There are two types of licenses available from ProVu, User licenses and Device licenses. User licenses can be used on up to four devices, whereas device licenses can only be used on one specified device i.e. if a user purchases a desktop license, this will allow access to Bria Stretto via a desktop device only.

### Bria Stretto Add-on Modules:

Bria Stretto offers a range of add-on modules which can be added to the provisioning module to enhance its capabilities and functionality. Available add-on modules include:

#### SMS over IP:

Enables SMS capability for VoIP users for both inbound and outbound messages.

#### XMPP Messaging & Presence:

Provides an XMPP server for messaging and presence services.

#### Help Desk:

Enables you to remotely support and troubleshoot Bria client problems in realtime.

#### **User Experience Metrics:**

Allows you to measure the frequency of end user issues, making it easier to fault find.

#### **Contact Discovery:**

Grants permission for users to see contacts who are using the same service.

#### **Call Continuity:**

Allows calls to be seamlessly handed over from Wi-Fi to cellular networks without dropping off.

#### Subscriber Line Proxy:

Empowers businesses to extend a single line extension to multiple devices.

## SIP/Simple Messaging & Presence:

Provides a SIP/Simple server for messaging and presence services.
