

Switching between Peer2Peer and SIP Server Mode on Slimline/Cityline/Skyline Range.

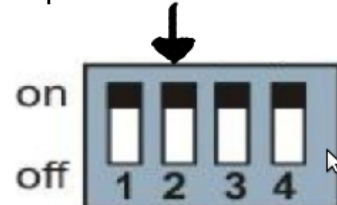

From factory all Slimline/Cityline/Skyline products come in Peer2Peer mode. Most of the time you would want the device to be in SIP mode. This tutorial explains how to change the door phone from Peer2Peer to SIP server mode.

SlimLine:

On SlimLine, open front panel with an allen key (provided in the box) and look for the dip/mode switch located on the top right corner beside microphone connector (marked Mode switch in diagram below). Change dip switch 2 to off position and reboot the door phone. On reboot it will come back in sip server mode.

Dip Switch 2 when on is P2P

Cityline/Skyline:

Procedure on Cityline and Skyline device is the same with only difference being that it does not have a front panel attached. The dip switch is located above the blue screw type 12V IN connector (14 on diagram below)
