

Provisioning  
**ProSys TR-069**  
Router Provisioning & Management

Router Provisioning enables you to simplify your delivery and installation of routers. Thanks to our latest developments, you can now ship routers direct to your customers' site ready to work automatically out-of-the-box and remotely manage configuration settings post deployment - saving you both time and money.

### How it works

Router provisioning works similarly to phone provisioning - we can work with you to create your own personalised provisioning template with your choice of popular settings. Your template will then be applied to your routers prior to shipping to your customers' address. In order to do this, we use the TR-069 protocol.

#### Benefits for you

- ✓ We ship direct to your customer's site saving time and reducing shipping costs
- ✓ No need for an engineer to manually set up routers
- ✓ Settings are applied automatically; reduced risk of inputting errors
- ✓ Respond quickly to potential security issues by updating firmware and other settings remotely

#### Benefits for your customers

- ✓ Routers arrive next day
- ✓ Routers arrive brand new and ready to use
- ✓ Configured routers are clearly labelled for ease of identification
- ✓ Support/update requests are dealt with quickly and efficiently

## What is TR-069?

TR-069 is the name of a protocol used to remotely provision and manage devices. It's an industry standard protocol and offers a secure provisioning method for routers.

## Devices we provision

Developed to give you ultimate flexibility, our router provisioning server is not limited to a specific brand or platform. We can provision any ASUS, DrayTek or Technicolor router to work with any Service Providers' platform.

## Router Management

New for 2018, you can now remotely manage your provisioned routers online. Router Management allows you to edit any TR-069 enabled setting in your deployed routers, regardless of its physical location.

Please note, in order to take advantage of ProSys Router Management your device must be provisioned by us at the time of ordering.

## Pricing

There are no heavy start up or commitment costs to router provisioning, our services are flexible so you only pay for what you need.

**£4.00**  
per router

Ongoing management of router settings is free for one year post despatch, after this time a small charge of just £0.25 per month, per router will be applied.

**FREE for**  
1 year

## What to do next?

Set up couldn't be easier, simply call our Tech Team on 01484 840048 and we will work with you to create your own provisioning template, featuring all of your preferred settings free of charge. Once this is complete, you are ready to go and enjoy seamless provisioning on all of your router orders.
