Product Overview
Hotel & Hospitality

Snom telephones for the hotel and hospitality industry

Snom telephones have been used in the hotel and hospitality industry for a long time now. Initially implemented mainly in the reception areas and top category rooms.

Over time and with the help of our specialised partners, we realised that putting a Snom phone in all the rooms of a hotel could be an interesting opportunity in both senses. In several countries around the world, the presence of a telephone in the room is decisive for the awarding of a 3-star or higher rating. It was clear that we needed dedicated terminals for this sector.

Thanks to our parent company VTech's experience in the hotel sector, we are delighted to introduce you to our IP telephony solutions specifically tailored to the hospitality sector on the following pages.

Room telephones

Whether it's used as a stylish accessory or a practical device – a room telephone must meet different requirements from a classic business device with which we've built our reputation.

From speed dial keys for the most important functions, such as reception, room service or SPA, to quick and easy personalisation, using printed labels or the need for daily cleaning, the hospitality industry has different requirements to the standard business device.*

* More DECT solutions can be found on our website snom.com.

All devices of the HM and HD series have a 3 year warranty

Reception

In a reception, clarity is the key to success.

Receptionists must be able to see what type of call is coming in at a glance: external, internal, from the back office or from one of the rooms.

The requirements and approach differ depending on the origin of the call. In other words, a large, high-resolution display, perhaps with an appropriate extension, is absolutely essential here.*
